INSTALL GUIDE

Get LiftLog on your phone

Takes about 2 minutes. LiftLog isn't on the Play Store, so you install it straight from a file. Your phone will show a few safety warnings along the way. That's normal.

Android 8.0 or newer | Not for iPhone

1 Download the app

1. On your phone, open this link in **Chrome**:

   ```
   github.com/Codyphil679/workout-app/releases/latest
   ```

2. Scroll down to **Assets** and tap the file ending in **.apk**.
3. If Chrome says *"This type of file can harm your device"*, tap **Download anyway**.

2 Open the file

- When the download finishes, tap **Open** at the bottom of the screen.
- Missed it? Open the **Files** app (**My Files** on Samsung) → **Downloads** and tap the **.apk**.

3 Allow Chrome to install apps

Only the first time. Android will say *"your phone is not allowed to install unknown apps from this source."*

1. Tap **Settings** in that message.
2. Turn on **Allow from this source**.
3. Tap the **back arrow** to return to the installer.

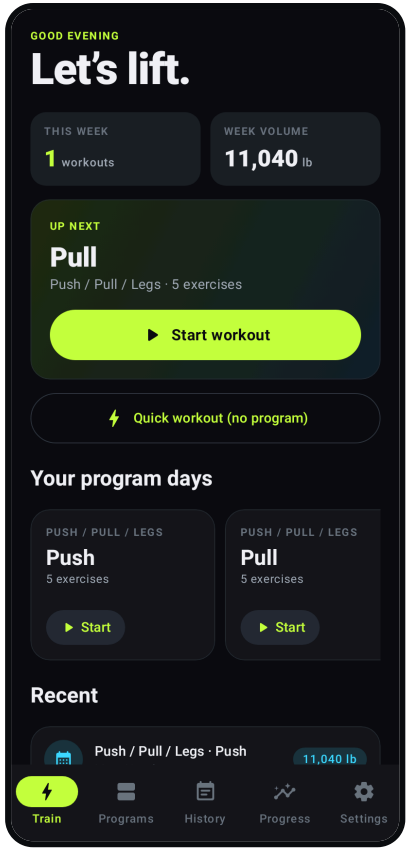

> **Samsung:** if you see a message about **Auto Blocker**, go to Settings → Security and privacy → Auto Blocker, turn it **off**, then repeat Step 2. You can turn it back on afterward.

4 Install

1. Tap **Install**.
2. If Google Play Protect warns *"Unsafe app blocked"* or *"Unknown developer"*: tap **More details** → **Install anyway**. If it offers **Scan app**, you can tap that. It'll scan the app, then let you install.
3. Tap **Open** when it's done.

5 First launch

1. When it asks to send notifications, tap **Allow**. That's how the rest timer buzzes you when your phone is in your pocket.
2. Go to **Programs** and tap a starter template (like *Push / Pull / Legs*), or build your own.
3. Go to **Train** → **Start workout**. Enter weight and reps, then tap ✔. The rest timer starts automatically.

The Train screen you'll see after setup

Keep your workouts safe

Everything is stored **only on your phone**, with no account and no cloud. Now and then, go to **Settings** → **Back up everything** and save the file to Google Drive.

Uninstalling LiftLog deletes your workouts unless you've made a backup.

Installing an update later

Download the new **.apk** from the same link and install it the same way. Your workouts stay.

If it says *"App not installed"* or *"package conflicts"*:

1. Old app: **Settings → Back up everything** and save the file.
2. Uninstall LiftLog.
3. Install the new version.
4. New app: **Settings → Restore from backup** and pick your file.

Something not working?

PROBLEM	FIX
No .apk file on the download page	Ask Cody to check that the release has the APK attached.
"App not installed"	Check you have Android 8.0+ (Settings → About phone). If it's an update, see above.
Can't find the downloaded file	Files / My Files app → Downloads.
Rest timer doesn't buzz	Settings → Apps → LiftLog → Notifications → turn on.
